INDONESIAN JOURNAL OF MATERIALS SCIENCE

Vol. 20, No 3, April 2019

PREFACE

We would like to present, with great pleasure, Indonesian Journal of Materials Science Vol. 20, No. 3, April 2019. This journal presents 7 (seven) papers with titled: Synthesis and Characterization of Graphene from Coconut Fiber (*Cocos Nucifera*) as Anode Materials for Li-Ion Battery; Rat Blood Profile Evaluation After Fe₃O₄/Chitosan Colloid Injection; Surface Plasmon Resonance of Au@TiO₂ Core-Shell Nanoparticles on the DSSC Performance; Synthesis of Magnetic Composite of Iron Compounds/Carbon Nanotubes in Chemical Vapor Deposition; Mechanical Properties Prediction of IG-110 Graphite by Non Destructive Inspection Using Ultrasonic Method; Fabrication and Characterization of Starch Based Bioplastics with Palm Oil Addition; and Effect of H₂O₂ and MnO₂ as Oxidators of Gold and Copper Leach Pro-Cesses from Printed Circuit Boards. This journal was founded to represent the growing needs of material science research, now widely recognized as an integral part of scientific and characterization investigations.

We are certain that it will be followed by many others, reporting new developments in the material science field. This issue would not have been possible without the great support of the Editorial Board and secretariat members, and we would like to express our sincere thanks to all of them.

Finally, all the editorial boards conveyed the support of the writers and reviewers, so that the Indonesian Journal of Material Science could display articles on quality research and development materials that are expected to contribute to the development of materials science.

Editor in Chief
